

BDNET WATCHMAN™ IT GUARDIAN

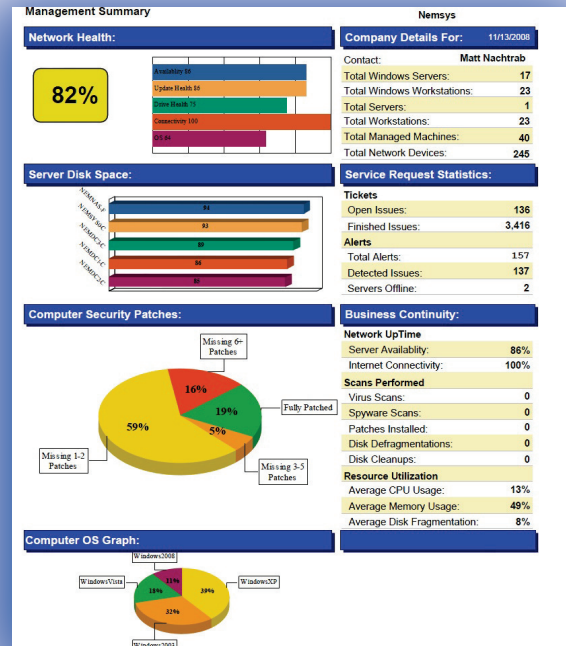

www.bdnetwork.com

BDNet Watchman™ IT Guardian is our network and systems management software that continuously assesses and appraises the health of your servers, systems and workstations—and the software that runs on them. We provide 24-7 monitoring to ensure that if there is trouble, we quickly know about it and can rapidly take action to either fix it outright—or minimize its impact on your business. In addition, **IT Guardian™** optimizes your systems for peak performance. It can even identify several potential breakdowns *before* they happen. As a result, repairs can be planned in advance (reducing replacement costs and ensuring the impact of downtime is minimized)!

At-a-Glance. Know the real-time health of your networks, systems, and business services or infrastructure

- ### Features
- #### 24/7 Monitoring and Alerting
